- 80 Spindle Washers
- 82 Lock Washers
- 82 Grease Fittings
- 83 Warranty

The markets we serve

moveero

Reliably and safely servicing the world's off-highway industries.

moveero is a world leading manufacturer of off-highway Wheels, Hubs & Spindles.

With a history that dates back to 1908, we are proud of our heritage and continue to have the drive and determination to maintain our leading position in the markets we operate in.

Building on these core foundations with our valued customers we look to use our experience, expertise and knowledge to create opportunities in our existing and future markets.

Agriculture

We work in partnership with leading OEMs to develop and supply wheels that meet the needs of this constantly evolving market. Extensive R&D ensures that our solutions are efficient, safe and enable increased productivity of machinery.

Agricultural Wheels for:

- Tractors and combines – diameters from 15" to 54" and widths from 6" to 30".
- Towed agricultural implements – diameters from 15" to 42" and widths from 7" to 28"
- Irrigation wheels are available in diameters from 24" to 38" and widths from 8" to 15".

Bringing innovation to the agricultural market with new product solutions is a commitment moveero has made to the industry.

Profi-Fit

- Easy tire fitting
- Reduced weight
- Durable
- Patented product

Profi-Grip

- Eliminates slippage
- Tires protected
- Feature TW profile
- Patented product

Profi-Line+

- Trailed & load bearing wheels
- Extended fatigue life x 5
- Patented product

Our product portfolio has been developed to meet each industry's demands for safety, productivity, higher payloads and efficiency, together with driver safety and comfort, machine uptime and low maintenance. Our engineers work closely with operators to understand the challenges they face, enabling us to develop expertly-engineered solutions to meet their environmental, load and torque requirements.

Light construction

With a leading reputation for the design of 3 and 5 piece wheels, our products have excellent strength properties providing reliable performance, fatigue resistance at high loads, at speeds to withstand extreme site conditions, for OEMs and associated aftermarket customers worldwide.

The product range includes diameters from 12" to 35" and widths from 5" to 36", designed for backhoe loaders, skid steer loaders, small wheel loaders and telehandlers.

Heavy construction and mining

Designed to meet the demands for safety and productivity without compromising payload or efficiency.

Available in Diameters 20 – 35" and width 8.5 – 36", for wheel loaders, articulated dump trucks, motor graders and a range of wheels suitable for both underground and open mining, available in diameters up to 35" and widths up to 36".

Industrial and material handling

A leading supplier of wheels to the container-handling sector, moveero has been supplying container-handling equipment manufacturers, operators and ports worldwide for more than 30 years. Recognized for the quality, reliability and performance, we enable the smooth flow of materials for standard and heavy duty specialized vehicles.

Standard products are available in diameters from 8" to 33" and widths from 4.5" to 25".

With new ranges offering increased vehicle stability, durability and extended rim life with tire protection, contact us for further information about our material handling product range.

Forestry

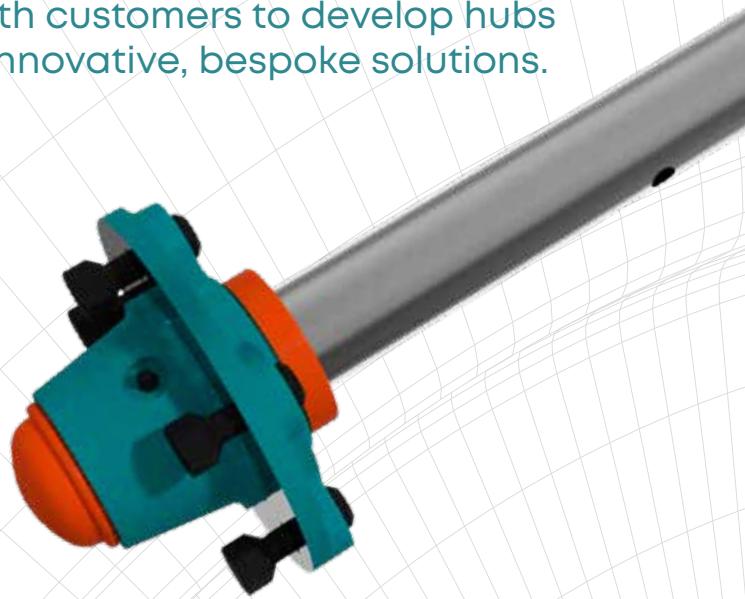

Forestry machinery operate in challenging terrain and require traction and stability to accommodate high loads. Our range includes complete solutions for forestry customers, combining robust designs with in-field and in-house testing to provide products that are not only safe and sustainable, but also offer increased productivity.

Standard product range includes diameters from 22.5" to 32" and widths from 20" to 27".

Products and services

As a leading manufacturer of hubs and spindles, we supply our Hub Systems range to all major manufacturers and OEMs across North America and Europe. We work closely with customers to develop hubs that enhance performance by offering innovative, bespoke solutions.

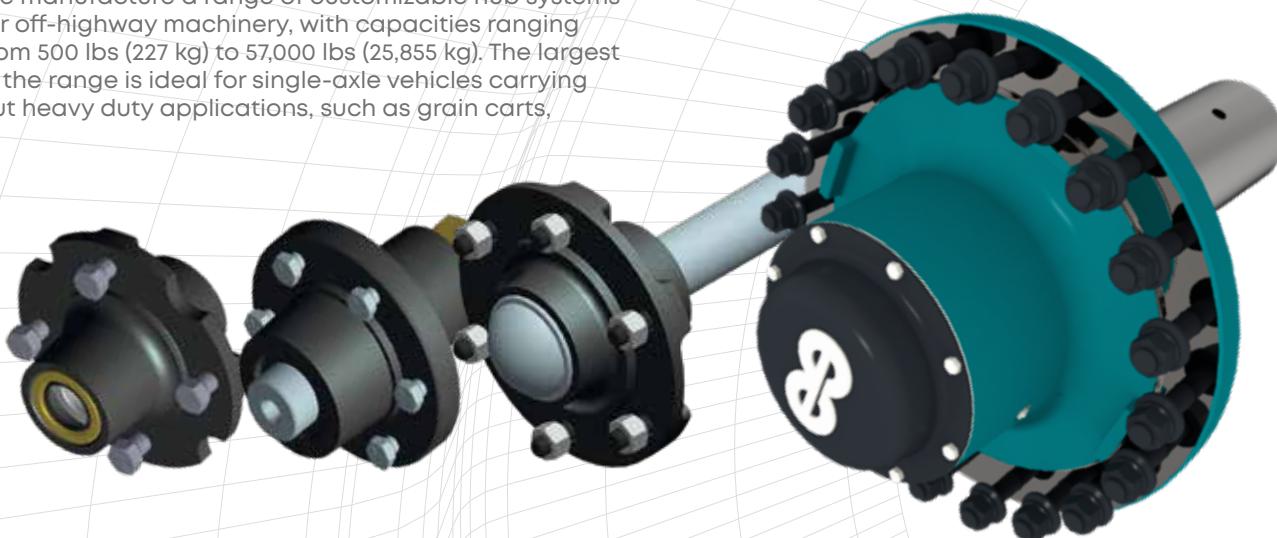

Quality product and service

With a commitment to high quality manufacturing processes and finishes, we supply premium products that are custom-engineered to suit our customers' specific applications, even in the most demanding and challenging environments. Our collaborative approach, working with customers, means that our hubs and spindles are focused on problem-solving to provide solutions that maximize productivity and up-time. We constantly work to design and test products to match the latest equipment trends, including higher payload, increased speed, lower vehicle weight and higher technical specification.

We manufacture a range of customizable hub systems for off-highway machinery, with capacities ranging from 500 lbs (227 kg) to 57,000 lbs (25,855 kg). The largest in the range is ideal for single-axle vehicles carrying out heavy duty applications, such as grain carts,

slurry wagons and towed scrapers. The hub can be fully customized, with an option to include disc brake components if required.

Bent and straight spindles can be fully customized to specified dimensions. Cultivation; Straddle and standard designs are available with a range of bolt configurations. Our hubs are all sold complete with bearings, seals, hub caps and nuts and can be supplied machined and cupped only or in assembled and greased hub and spindle units.

Profi-Hub

moveero

Revolutionizing the design – Profi-Hub

moveero's innovative Profi-Hub is the perfect solution for today's machinery demands.

Designed by our experienced engineers, the new Profi-Hub series combines increased carrying capacity, with improved servicing and performance.

moveero's known hub range – the 871 and 873 – have been re-designed to reflect today's more demanding market requirements and offer improved features and capabilities with much greater value to customers.

Profi-Hub provides increased carrying capacity (loads up to 15,700 lbs), improved bearing

The patented Profi-Hub Series has been designed to reflect the demands of modern machines, and sets a new standard in global off-highway engineering, providing manufacturers of the largest trailers and machines with an unbeatable assurance of reliability and strength.

performance and improved servicing, with the hub's recessed grease fitting reducing the risk of damage whilst in use and its press-on style hub cap simplifying serviceability.

The Profi-Hub range offers three areas of improvement.

1. Increased carrying capacity

- Capable of load requirements up to 15,700 lbs.
- Casting weight has been reduced by 15 lbs.
- As a result carbon footprint has improved by 30 lbs of CO₂ per hub.

2. Improved bearing performance

- The re-designed hub has been tested to demonstrate a remarkable 2.5x bearing improvement, with a design patent registered on the new shaped hub.

3. Improved servicing

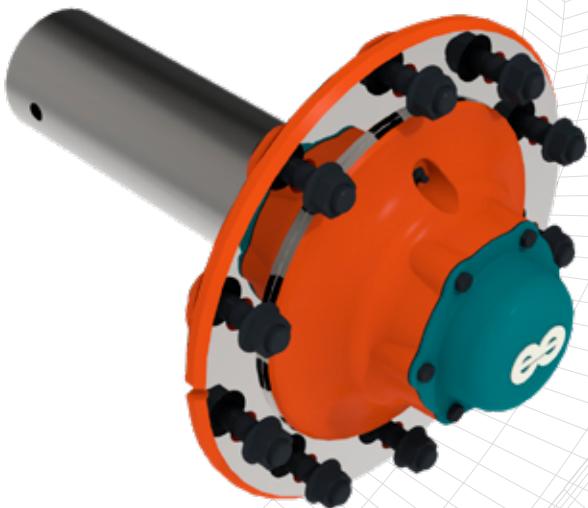

- The recessed grease fitting reduces the risk of damage while in use.
- A press-on style hub cap simplifies the serviceability. A simple pry tool is all that is required to remove the cap.

Our hub manufacturing facility and customer service support team are located in Armstrong, Iowa, ensuring that all products are manufactured to the highest standard and value, while providing accurate and timely customer order status.

Assemblies can be delivered in a wide range of configurations to maximize installation efficiencies.

Product range and capacities

- 4 Bolt through 20 Bolt+ Bolt patterns (4, 5, 6, 8, 10 and 20 patterns).
- Traditional weight capacities range from 500 lbs to 50,000 lbs.
- Sold in a variety of configurations including machined hub, hub with cups installed, and complete hub and spindle assemblies:
 - With or without spindles.
 - With or without brake rotor mounting pads.
 - With studs, some with threaded holes for wheel mounting.
 - With bolt patterns and sizes which can be customized to meet the application and customer's requirements.

Product design and testing

Product design

With extensive product research and development capabilities, we are committed to continuous product improvement and the delivery of innovative solutions to meet the changing needs of our customer and the market.

Our R&D team work closely with OEMs to develop hubs that enhance performance, with each new product designed to meet the specific requirements of the customer and application, providing strength and durability without adding unnecessary weight. This assists in minimizing fuel consumption, whilst maximizing payloads.

Before any product design is undertaken, we commission a thorough and comprehensive study of customer and machine requirements, with initial designs being based on extensive knowledge of existing products and their applications.

Advanced analytical models are created to enable us to develop high quality solutions in the virtual world, before committing to the manufacture of any parts. Finite Element Analysis (FEA) and Fatigue Analysis, supported by a comprehensive material database, are used to develop efficient products and systems that will meet specified performance and durability requirements.

Testing

Supporting our market leadership in the design, development and manufacture of off-highway wheels and hubs, we have a fully equipped wheel and hub test facility for customers across North America and further afield.

The facility includes a dedicated hub test stand which is capable of operating our largest capacity hub, enabling engineers to carry out dynamic cornering fatigue testing of the hub and spindle assembly. By controlling the test load, spindle length, and test speed (to replicate the maximum bearing loads of the system under the most extreme conditions), we can test high-capacity agricultural and construction hubs at the test centre, virtually eliminating the need for expensive and time-consuming field testing.

By undertaking testing in this real-world environment, both wheel and hub testing are carried out to simulate virtually any operating conditions, providing accurate performance data which is not only invaluable to customers, but also inputs into manufacturing,

development and investment plans. The ability to apply loads up to 100,000 lbs, makes this the largest known hub testing machine in the world, enabling our engineers to develop larger hubs more quickly and more efficiently to meet our customers' needs.

moveero is one of the few organizations with the total engineering capability to offer design, simulation and validation and continue to make significant investments in both laboratory and field testing equipment. We have some of the most advanced purpose built, electronically controlled systems in the industry, including:

- FEA modelling and simulations
- Field testing and data acquisition
- Life expectancy/fatigue analysis

Our comprehensive facilities and approach result in:

- Products with reduced weight and enhanced durability
- Reduced lead time from design to production
- Reduced likelihood of early system problems
- Improved product reliability and dependability
- Enhanced total system performance
- Cost-effective design
- Global offering

Custom solutions

On occasions, OEMs may require customized solutions to match specific, and often highly challenging, conditions. In such circumstances we work closely with the customer's design teams and the tire manufacturers to provide these customized solutions, enabling the OEM to accurately match wheel designs to the equipment requirements, region and operating conditions.

We are able to provide support to customers from concept, through design, analysis and testing – employing our versatile production and engineering facilities to design, manufacture and test these customized designs.

Working with customer's design engineers in a collaborative way, we provide customers with a technical resource that includes design, engineering validation and product testing.

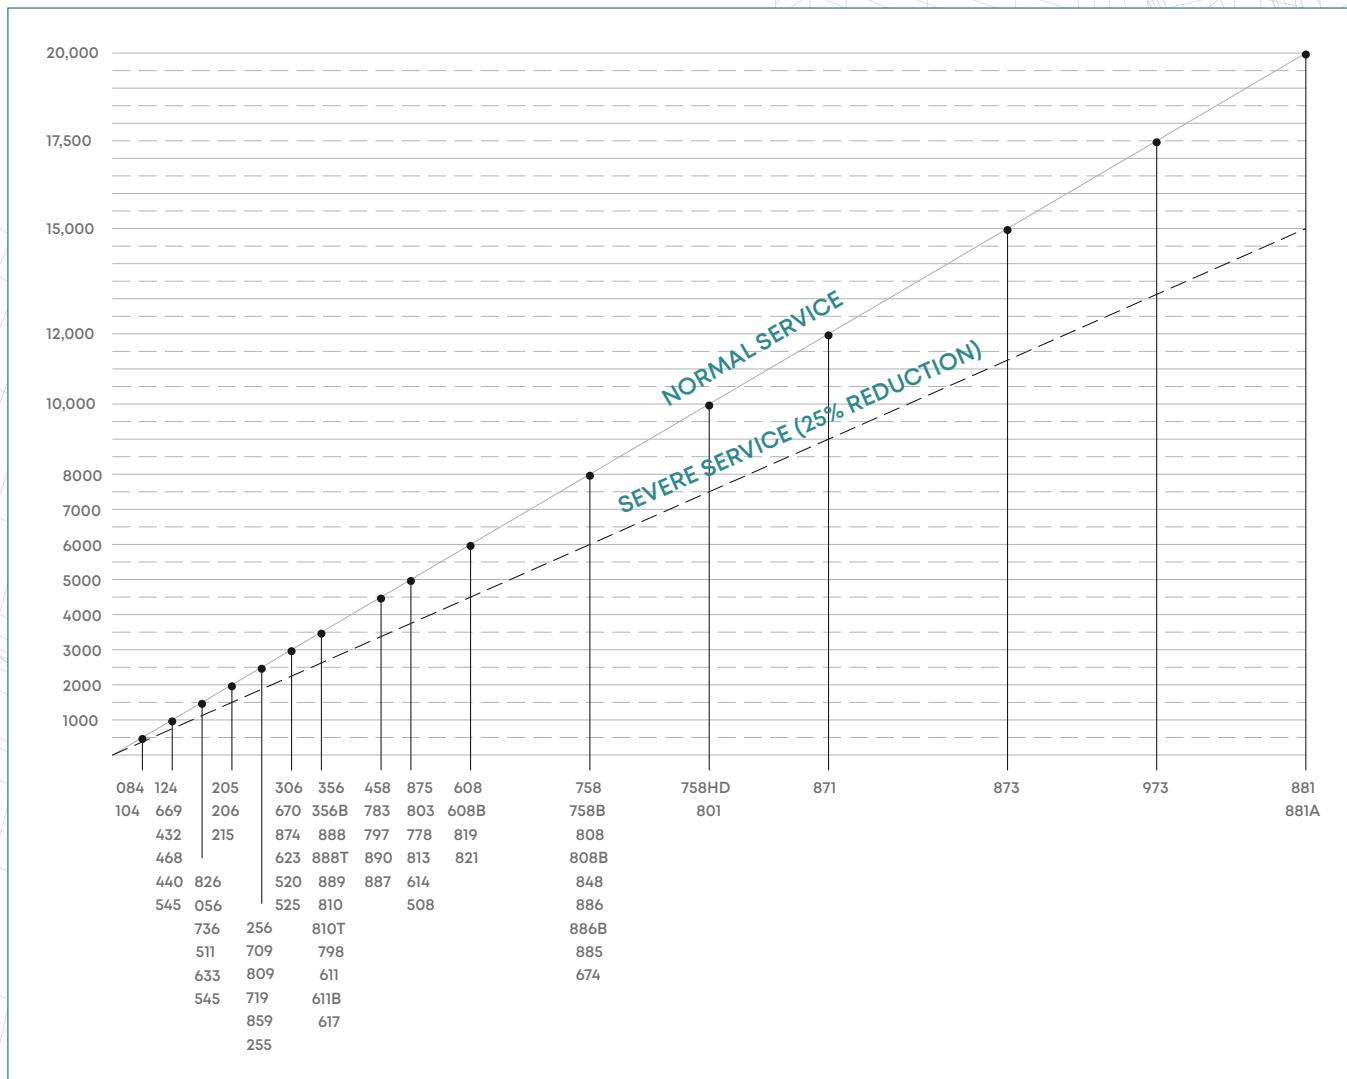

Load ratings and capacities

Hub capacities in this catalog are based on 20,000 mile B10 bearing life at normal tractor speeds up to 20 MPH and 14,000 PSI maximum fibre stress on the spindle in the bearing and seal area.

The use of these products for other than free rolling applications, such as drive wheels, tandem axles, hillside operations, and rough terrain, will reduce the stated capacities. The capacities assume normal tire inflation pressures and do not indicate tire capacity.

The actual capacity may vary from the stated capacity due to the conditions of service, so the manufacturer must test its equipment under the most severe conditions to determine that the proper component selection has been made.

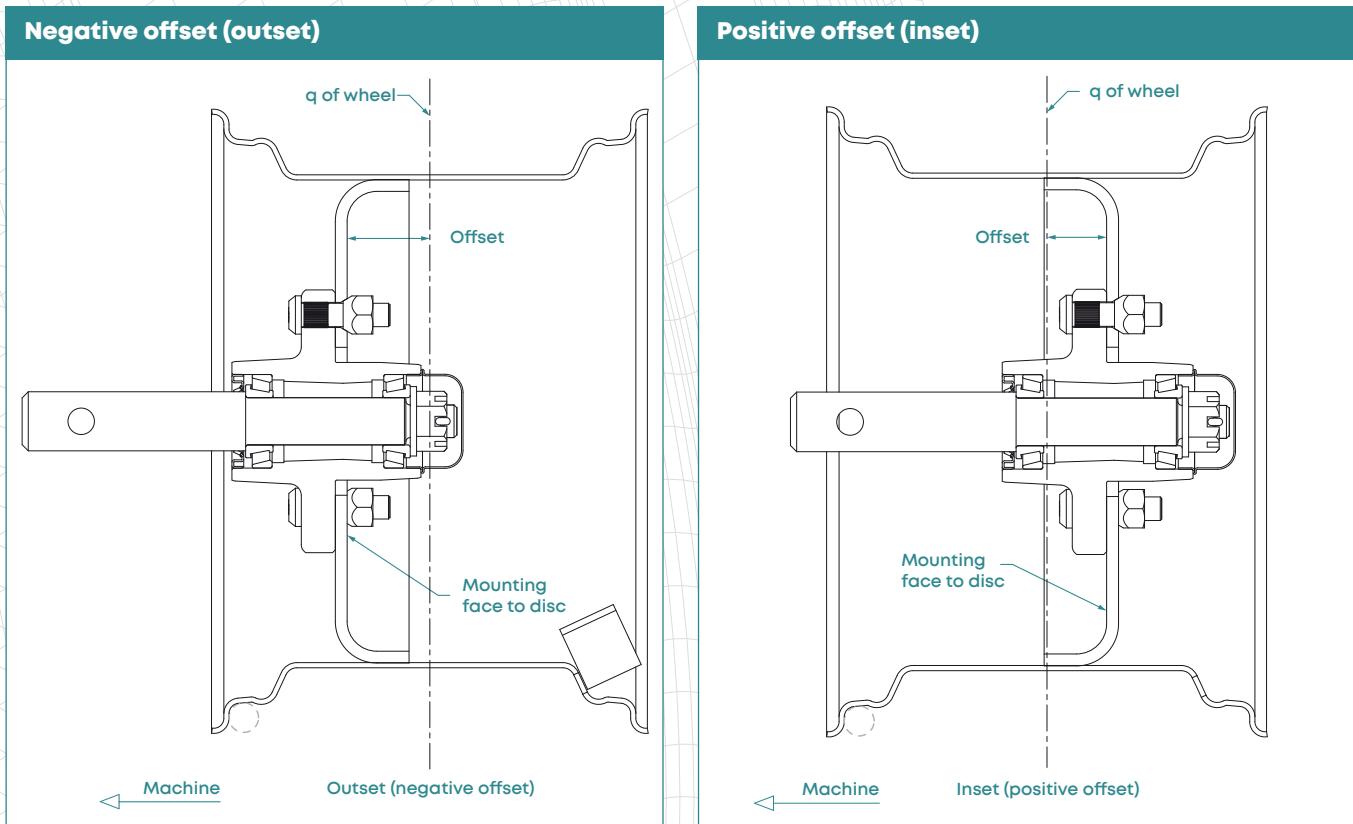

The service application graph is a general guide showing the reduction in capacity for the various hub packages when service conditions are severe.

For additional service information, please contact moveero customer service.

What is an offset?

The difference between the rim centerline and the vertical mounting face of the disc.

Negative offset is the distance between the mounting face of the disc and the rim centerline. This distance is termed negative when the mounting face is **in-board** of the rim centerline.

Positive offset is the distance between the mounting face of the disc and the rim centerline. This distance is termed positive when the mounting is **out-board** of the rim centerline.

- 169A & 176A are non-brake version hubs.
- 169B & 176B are brake version hubs. Hubs are machined to have 6X 1/2-20 UNF bolt holes on an 8.25" brake pattern.
- All hubs are based on 0 offset.
- All hubs are equipped with a grease fitting.
- All hubs are available in grease or oil bath designs.
- All designs are compatible with previous models 871, 871B, 873, and 873B.
- Hubs are made from Gray Iron Castings.

Warranty

Subject to the terms and conditions hereinafter set forth, moveero Inc. ("moveero") warrants moveero products sold by moveero to be free from defects in material and workmanship under correct use, normal operating conditions and proper applications which shall include maintenance of products in accordance with moveero manuals and service bulletins, for a period of one year from the date of shipment by moveero.

This warranty does not extend to products or parts damaged or subjected to accident, abuse, misuse or improper installation after shipment from our factory, nor to products or parts altered or repaired by anyone other than authorized moveero representatives.

Disclaimers

This limited warranty is the only warranty extended by moveero in connection with any sale by moveero to the original purchaser or manufacturer and does not extend to successive buyers, users, third parties or employees. **THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE**, notwithstanding disclosure to moveero of the product's intended use. Any implied warranties to the extent exclusion is permitted by law shall be limited to the term of the express warranty set forth herein. An affirmation of fact or promise made on behalf of moveero shall not be deemed to create an express warranty that the product shall conform to the affirmation or promise; any description of the product is for the sole purpose of identifying them and shall not be deemed to create an express warranty that the product shall conform to such description; any sample or model is for illustrative purposes only and shall not be deemed to create an express warranty that the product shall conform to the sample or model; and no affirmation or promise, or description, or sample or model, shall be deemed part of the basis of the bargain.

Exclusive remedy

moveero's obligation upon breach of warranty shall be limited to replacing or repairing at our option, free of charge, but not including installation, dismantling, reassembling or any other charge, the particular product or part which inspection discloses to have been defective at time of shipment. Inspection shall be at our plant, transportation costs prepaid by customer. Written notice of such defect shall be given by the customer to moveero within ten (10) days after such defect(s) appear. Written permission for any warranty claim returned must be first obtained from authorized moveero representatives. All returns must be accompanied with a complete written explanation of claimed defects and the circumstances of operational failure. Replacement or repaired products or parts shall be warranted under the terms of this warranty for the remainder of the term of the original warranty or of a period of two (2) months after such repair or replacement, whichever is longer. Upon expiration of the warranty, all of moveero's obligations hereunder shall terminate.

In no event shall moveero have any liability for payment of any consequential, incidental, indirect, special or tort damages of any kind including, but not limited to, any loss of profits, to the extent exclusion is permitted by law. This warranty states our entire and exclusive liability and buyers exclusive remedy for any claim of damages in connection with the sales or furnishing of moveero's products or parts, their design, suitability for use, installations or operation, or for any claimed defect therein. Products not manufactured by moveero are furnished subject only to the manufacturer's warranties, if any, and without warranties, express or implied, by moveero.

As consideration for this warranty, the original customer and subsequent purchaser agree to indemnify and hold moveero, harmless from and against all and any loss, liability, damages or expenses for injury to persons or property, including without limitation, the original customer's and subsequent purchaser's employees and property, due to their acts or omissions or the acts or omissions of their agents, and employees in the installation, transportation, maintenance, use and operation of said equipment.
